

# COMPASS Business Intelligence Solutions

## AVAILABLE TRAINING

### BEGINNER REPORT TRAINING

Training designed to introduce the user to the Argos reporting tool and data. By the end of the training session, the user will be able to create datablocks and reports that will be the building blocks for most reporting needs.

### REFRESHER REPORT TRAINING

Training designed to refresh the user on the Argos reporting tool and data. Prerequisite: Beginner Report Training.

### ADVANCED REPORT TRAINING

Training designed for the person with moderate to extensive experience with the Argos reporting tool and data. We will train you to use the programming features of Argos to create advance reporting solutions. Topics covered will include OLAP Cubes, Banded Reports, Sub-Detail Queries and Argos Charts. Prerequisite: Beginner Report Training.

## flexible solutions for your business intelligence reporting needs

The Enterprise Information Systems office provides training to college and departmental representatives in the Evisions Argos reporting tool.

Using the Operational Data Store (ODS), users are able to create ad hoc reports from admissions and enrollment data to meet their business intelligence needs. The data includes grades, course work, admission application, academic program outcome and contact information from the Compass Database. The Argos tool allows an easy-to-use GUI interface to create CSV and PDF files and reports for departmental reporting needs. The Argos end user reporting tool puts the power of Compass student data at your fingertips.

### Upcoming User Training

**Feb 10, 2017 - Refresher Training**

8:30 am - 11:30 am - Session I

1:30 pm - 4:30 pm - Session II
